

RF-AK7P

Wireless Access Keypad

- with proximity tag

A secure and sleek wireless access control unit designed to protect and control access to both residential and commercial properties. With programmable entry codes, this product allows up to 250 unique entry codes to suit all applications. Proximity version available.

Using HKC's SecureWave wireless technology the keypad can be integrated with our SW-10270 panel and can also work in standalone mode with our wireless relay box (RF-RBX).

The RF Access keypad is locally configurable through SmartLink700. It is IP67 rated to ensure it is weather proof.
